OptiTech™

Puts the fleet manager in control

Whether your fleet has one truck or one thousand, OptiTech allows you to update both engine parameters and ECM calibrations remotely via over-the-air programming technology, without ever opening a hood or visiting a service facility.

With the ability to modify a growing list of critical parameters* in real time, OptiTech gives you the tools to influence the outcomes that matter most to your business, from fuel savings to driver retention to on-time performance.

*OptiTech features may not all be available for your engine. Contact your Cummins representative or equipment manufacturer for further details.

As Dynamic as the Road Ahead

From diverse terrains to varying duty cycles, OptiTech allows you to custom-configure select performance features of your powertrain remotely as business conditions, driver missions, or local regulations change.

Ready When You Are

OptiTech's custom templates allow you to test, validate and store unique parameter configurations, ensuring optimized powertrain profiles are always ready to be deployed for the right situation at the right time.

Peace of Mind, Automated

Features like Trim Shield and AutoResolve ensure your vehicles are always operating as specified and give you visibility into the current status of trim settings or changes fleet-wide.

Delight Your Drivers

Provide a tailored experience for each of the drivers in your fleet and maximize operational performance for the roads they're traveling on, without the hassle historically associated with parameter updates.

Parameter Programming at Scale

With the scalability of over-the-air programming technology, you can custom-configure individual vehicles or efficiently apply standardized settings across an entire connected fleet in a matter of seconds.

Delivered Without Delay

Once deployed by the fleet manager, a simple key cycle is all that's needed for a parameter update to take effect — keeping vehicles on the road and performing at their best with zero downtime. ECM calibrations can be installed in as little as five minutes.

Ask your telematics provider, local dealer or Cummins account representative how you can get OptiTech activated for your vehicles.
