Operator Manual

Onan Generator Set for RV

HGJBB (Spec A-B)
CALIFORNIA
Proposition 65

Warning: Natural Gas/Liquid Propane Gas engine exhaust and some of its constituents are known to the State of California to cause cancer, birth defects, and other reproductive harm.

6.2.12 Code 35 - Control Card Failure

6.2.13 Code 36 - Engine Stopped

6.2.14 Code 37 - Invalid Generator Set Configuration

6.2.15 Code 38 - Over Current (Field Overload)

6.2.16 Code 41 - Generator Rotor

6.2.17 Code 42 - Processor

6.2.18 Code 43 - Processor

6.2.19 Code 45 - Speed Sense

6.2.20 Code 47 - Ignition

6.2.21 Code 48 - Generator Field Sense

6.3 Symptom Based

6.3.1 Status Indicator Not Working

6.3.2 Starting Batteries Run Down

6.3.3 Starter Engages-Disengages

6.3.4 Status Indicator Goes Out While Cranking—No Start

6.3.5 No Power—Generator Set Running, Status Light On

7. MAINTENANCE RECORD
This page is intentionally blank.
1 Important Safety Instructions

1.1 Overview

Thoroughly read the Operator Manual before operating the generator set. It contains important instructions that should be followed during operation and maintenance. Safe operation and top performance can only be achieved when equipment is properly operated and maintained. The owners and operators of the generator set are solely responsible for its safe operation.

Generator set operation, maintenance, and installation must comply with all applicable local, state, and federal codes and regulations. Electricity, fuel, exhaust, moving parts, and batteries present hazards which can result in severe personal injury or death. Only trained and experienced personnel with knowledge of fuels, electricity, and machinery hazards should perform generator set installation or adjustment procedures; or remove, dismantle, or dispose of the generator set.

1.2 Warning, Caution, and Note Styles Used in This Manual

The following safety styles and symbols found throughout this manual indicate potentially hazardous conditions to the operator, service personnel, or equipment.

<table>
<thead>
<tr>
<th>Style</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>DANGER</strong></td>
<td>Indicates a hazardous situation that, if not avoided, will result in death or serious injury.</td>
</tr>
<tr>
<td><strong>WARNING</strong></td>
<td>Indicates a hazardous situation that, if not avoided, could result in death or serious injury.</td>
</tr>
<tr>
<td><strong>CAUTION</strong></td>
<td>Indicates a hazardous situation that, if not avoided, could result in minor or moderate injury.</td>
</tr>
<tr>
<td><strong>NOTICE</strong></td>
<td>Indicates information considered important, but not hazard-related (e.g., messages relating to property damage).</td>
</tr>
</tbody>
</table>

1.3 General Safety Precautions

**WARNING**

Operation of equipment is unsafe when mentally or physically fatigued. Do not operate equipment in this condition, or after consuming any alcohol or drug.
### Important Safety Instructions

**WARNING**

*Maintaining or installing a generator set can cause severe personal injury. Wear personal protective equipment such as safety glasses, protective gloves, hard hats, steel-toed boots, and protective clothing when working on equipment.*

**WARNING**

*Running the generator set without the cover or service door can cause severe personal injury or equipment damage. Do not operate the generator set with the cover or service doors removed.*

**WARNING**

*Starting fluids, such as ether, can cause explosion and generator set engine damage. Do not use.*

**WARNING**

*Benzene, found in some fuels, has been identified by some state and federal agencies to cause cancer or reproductive toxicity. Do not ingest, breathe the fumes, or contact gasoline when checking, draining, or adding gasoline.*

**WARNING**

*Used engine oils have been identified by some state and federal agencies to cause cancer or reproductive toxicity. Do not ingest, breathe the fumes, or contact used oil when checking or changing engine oil.*

**CAUTION**

*To prevent accidental or remote starting while working on the generator set, disconnect the negative (-) battery cable at the battery using an insulated wrench.*

**CAUTION**

*Unsecured or loose fasteners can cause equipment damage. Make sure all fasteners are secure and properly torqued.*

**CAUTION**

*Oily rags and other material can cause fire and restrict cooling. Keep the generator set, drip pan, and compartment clean.*

**CAUTION**

*Accumulated grease and oil can cause overheating and engine damage presenting a potential fire hazard. Keep the generator set clean and repair any oil leaks promptly.*

**NOTICE**

*Keep multi-class ABC fire extinguishers handy. Class A fires involve ordinary combustible materials such as wood and cloth. Class B fires involve combustible and flammable liquid fuels and gaseous fuels. Class C fires involve live electrical equipment. (Refer to NFPA No. 10 in applicable region.)*
1.4 Automatic Generator Start Control Hazards

**WARNING**

Accidental starting can cause severe personal injury or death. Turn off the AGS whenever performing maintenance or service, when the vehicle is stored between uses, is awaiting service, or is parked in a garage or other confined area.

Unexpected starting may occur if the generator set is equipped with an inverter-charger or other Automatic Generator Start (AGS) control. This may cause exposure to:

- Unexpected generator starting
- Moving parts hazards
- Electric shock
- Exhaust carbon monoxide (CO)

1.5 Electrical Shock and Arc Flash Can Cause Severe Personal Injury or Death

**WARNING**

Electrical shocks and arc flashes can cause severe personal injury or death. Adhere to the following guidelines:

- Only qualified service personnel certified and authorized to work on power circuits should work on exposed energized power circuits.
- All relevant service material must be available for any electrical work performed by certified service personnel.
- Exposure to energized power circuits with potentials of 50 VAC or 75 VDC or higher poses a significant risk of electrical shock and electrical arc flash.
- Refer to standard NFPA 70E, or equivalent safety standards in corresponding regions, for details of the dangers involved and for safety requirements.

1.6 Generator Voltage Is Deadly

**WARNING**

Improperly connected generator electrical output connections can cause equipment damage, severe personal injury, or death. Electrical connections must be made by a trained and experienced electrician in accordance with applicable codes.

**WARNING**

Improper installations can cause equipment damage, severe personal injury, or death. All installations must be conducted by trained and experienced personnel in accordance with the installation instructions and all applicable codes.
1. Important Safety Instructions

1. Important Safety Instructions

1.7 Engine Exhaust/Carbon Monoxide Is Deadly

**WARNING**

Substances in exhaust gases have been identified by some state and federal agencies to cause cancer or reproductive toxicity. Do not breathe in or come into contact with exhaust gases.

**WARNING**

Carbon monoxide is a poisonous gas. Inhalation of this gas can cause severe personal injury or death. Adhere to the following bullet points to make sure carbon monoxide is not being inhaled by occupants of the vehicle as well as others working on or around the generator set.

- Inspect for exhaust leaks, and test and confirm that all carbon monoxide detectors are working in accordance with the manufacturer's instructions or owner's manual, prior to every startup, and after every 8 hours of running.
- Never occupy the vehicle while the generator set is running unless the vehicle is equipped with a working carbon monoxide detector.
- Never operate the generator set when the vehicle is in a confined space, such as a garage, basement, or building of any kind.
- Make sure the exhaust system is installed in accordance with the generator set installation manual.
- Never use engine cooling air for heating a working or living space compartment.

Carbon Monoxide (CO) is odorless, colorless, tasteless, and non-irritating. It cannot be seen or smelled. Exposure, even to low levels of CO for a prolonged period can lead to asphyxiation (lack of oxygen).

Mild effects of CO poisoning include:

- headache
- dizziness
- drowsiness
- fatigue
- chest pain
- confusion

More extreme symptoms include:

- vomiting
- seizure
1.8 Fuel Is Flammable and Explosive

**WARNING**

Fuel and fuel vapor is highly explosive. Adhere to the following bullets to avoid igniting fuel and fuel vapors.

- Do not smoke or turn electrical switches on or off where fuel fumes are present or in areas sharing ventilation with fuel tanks or equipment.
- Keep flame, sparks, pilot lights, arc-producing equipment and all other sources of ignition well away from fuel lines and sources.
- Fuel lines must be secured, free of leaks, and separated or shielded from electrical wiring.

Leaks can lead to explosive accumulations of gas.

- LPG sinks when released and can accumulate inside housings and basements and other below-grade spaces.

**NOTICE**

Natural gas is identifiable by a rotten egg smell.

1.9 Battery Gas Is Explosive

**WARNING**

Battery gas is highly explosive and may cause personal injury or death if ignited. Take the proper precautions to avoid personal injury.

- For personal safety, wear appropriate PPE when working on or around the generator set.
- To make sure battery gas is not ignited, do not smoke around the generator set.
- To reduce arcing when disconnecting or reconnecting battery cables, always disconnect the negative (–) battery cable first and reconnect it last.

1.10 Moving Parts Can Cause Severe Personal Injury or Death

**WARNING**

Moving parts can cause severe personal injury or death, and hot exhaust parts can cause severe burns. Make sure all protective guards are properly in place before starting the generator set.

**WARNING**

Hot moving, and electrically live parts can cause severe personal injury or death. Keep children away from the generator set.
1. Important Safety Instructions

**WARNING**
Hot, moving, and electrically live parts can cause severe personal injury or death. Only trained and experienced personnel should make adjustments while the generator set is running.

**WARNING**
Moving parts can catch on loose items such as clothing or jewelry. Do not wear loose clothing or jewelry near moving parts such as PTO (power take-off) shafts, fans, belts, and pulleys.

**WARNING**
Moving parts can entangle appendages such as fingers. Keep the protective guards in place over fans, belts, pulleys, and other moving parts and keep hands away from all moving parts.

1.11 CARB

**CAUTION**
Unauthorized modifications or replacement of fuel, exhaust, air intake, or speed control system components that affect engine emissions are prohibited by law in the state of California.

The California Air Resources Board (CARB) has requirements regarding modification & repair of fuel system & exhaust components including, but not limited to, adherence to evaporative emissions requirements in mobile installations. Evaporative generator sets must be used in trailers, fifth wheel trailers, and other non-motorized vehicles where on-board gasoline fuel storage is self-contained in the trailer equipment. Completing the installation of the generator set fuel evaporative system provides compliance with the California code of regulations for small off-road equipment effective January 1, 2008 and Federal Small SI regulation effective January 1, 2011. Any questions regarding the installation or evaporative emission certification should be directed to Cummins Inc. for clarification.

1.12 Generator Set Warning Labels

Warning signs are provided on the generator set at or near the point of risk. To avoid injury, always take the necessary precautions as indicated on the sample signs shown below.

- Caution or Warning. Indicates a risk of personal injury.
- Caution or Warning of Temperature Hazard. Indicates a risk of personal injury from high temperature.
- Caution or Warning of High Voltage Hazard. Indicates a risk of personal injury from electric shock or electrocution.

2 Introduction

2.1 About this Manual

This is the Operator Manual for the generator set or sets listed on the front cover. Each operator should study this manual carefully and observe all of its instructions and safety precautions. Keep this manual readily available for reference.

The information contained within the manual is based on information available at the time of printing. In line with Cummins Inc. policy of continuous development and improvement, information may change at any time without notice. The users should therefore make sure that before commencing any work, they have the latest information available. The latest version of this manual is available on QuickServe Online (https://quickserve.cummins.com).

The Operation, Maintenance, and Troubleshooting Chapters of this manual provide instructions necessary for operating the generator set and maintaining it at top performance. The owner is responsible for performing maintenance in accordance with the information provided in Chapter 5 on page 31.

This manual also includes generator set specifications and information on how to obtain service, emissions regulation compliance, and model identification.

See the Parts Manual for part identification numbers and required quantities. Genuine Cummins replacement parts are recommended for best results.

2.2 Related Literature

Before any attempt is made to operate the generator set, the operator should take time to read all of the manuals supplied with the generator set, and to familiarize themselves with the warnings and operating procedures.

⚠️ CAUTION

A generator set must be operated and maintained properly if you are to expect safe and reliable operation. The Operator manual includes a maintenance schedule and a troubleshooting guide. The Health and Safety manual must be read in conjunction with this manual for the safe operation of the generator set:

- Health and Safety Manual (0908-0110)

The relevant manuals appropriate to your generator set are also available, the documents below are in English:

- Operator Manual for RV Generator Set HGJBB (Spec A-B) (A031C171)
- Installation Manual for RV Generator Set HGJBB (Spec A-B) (A031C172)
- Generator Set Service Manual for RV Generator Set HGJBB (Spec A) (A031C173)
- Recommended Spares List (RSL) for RV Generator Set HGJBB (Spec A) (A043W890)
- Parts Manual for RV Generator Set HGJBB (Spec A-B) (A035B506)
- Standard Repair Times - CY Family (A031C174)
- Service Tool Manual (A043D529)
- Failure Code Manual (F1115C)
- Warranty Administration Manual (4021290)
2.3 Model Identification

Each generator set is provided with a nameplate that contains the model and serial numbers. This information is needed when contacting Cummins for parts, service, and product information.

Every character of the model number is significant. The last character of the model number is the specification letter which is important for obtaining the correct parts.

Record the generator set model and serial numbers in the figure below to have them available if needed.

2.3.1 Nameplate Location

![Nameplate Location Diagram]

**FIGURE 1. NAMEPLATE LOCATION**
2.4 How to Obtain Service

For generator set parts, service, and literature, contact the nearest authorized Cummins Inc. distributor. You may go to the Internet site power.cummins.com for information on contacting our distributors worldwide.

2.4.1 In U.S. and Canada

Call +1-800-CUMMINS™ (1-800-286-6467) for the nearest Cummins Inc. distributor in the United States or Canada. Press 1 (option 1) to be automatically connected.

If you are unable to contact a distributor using the automated service, consult the Yellow Pages. Typically, our distributors are listed under: generators - electric.

2.4.2 Outside U.S. and Canada

If you are outside U.S. and Canada, refer to power.cummins.com or send an email to ask.powergen@cummins.com.

2.4.3 Information To Have Available

• model number
• serial number
• date of purchase
• nature of the problem (see Chapter 6 on page 49)
3 Overview

3.1 Electromagnetic Compatibility Compliance

Generator sets emit and receive electromagnetic (radio frequency) energy. If the generator set affects operation of nearby devices, or nearby devices affect generator set operation, increase the distance between them.

When used in countries where compliance to the EMC directive is required: This generator set has been evaluated for use in the residential, commercial, and light industrial environments.

3.2 Information for Generator Set Users (Spark-Ignited Exhaust Emissions)

This generator set meets the requirements of exhaust emissions standards for 50-state operation as stated on the nameplate.

As a user of this generator set, please be aware that unauthorized modifications or replacement of fuel, exhaust, air intake, or speed control system components that affect engine emissions are prohibited. Unauthorized modification, removal, or replacement of the generator set label is prohibited.

Carefully review Operator (Owner), Installation, and other manuals and information you receive with the generator set. If unsure that the installation, use, maintenance, or service of the generator set is authorized, seek assistance from an approved Cummins dealer.

Generator set users may use the following table as an aid in locating information related to the requirements for emissions control.

<table>
<thead>

| Oil Capacity | 0.6 liters (0.63 qt) |
| Intake Valve Lash (Cold) | 0.12-0.15 mm (0.0047-0.0059 in) |
| Exhaust Valve Lash (Cold) | 0.12-0.15 mm (0.0047-0.0059 in) |
| Spark Plug Gap | 0.6–0.7mm (0.024-0.028 in) |
### 3. Overview

#### Ignition Timing
- **2.5 HGJBB**: 23° BTDC, non-adjustable
- **2.3 HGJBB**

#### Ignition Coil Gap
- **2.5 HGJBB**: 0.3–0.7 mm (0.012-0.020 in)
- **2.3 HGJBB**

#### Compression
- **2.5 HGJBB**: 3.9 kgf/cm$^2$ (55.47 lbf/in$^2$) @ 500 RPM
- **2.3 HGJBB**

#### DC SYSTEM:
- **Battery Voltage**: 12 Volts
- **Minimum Battery Rating**: 360 CCA @ –18 °C (0 °F)

#### INSTALLATION:
- **Minimum Free Air Inlet Area**: 232 cm$^2$ (36 in$^2$)
- **LPG Vapor Supply Pressure**: 229–330 mm (9–13 in) WC
- **LPG Liquid Connection Pressure**: 1/4-18 NPTF Tank Pressure
- **Weight**: 57 kg (125 lbs)
- **Minimum Compartment Size (H x D x W)**$^2$: 325 mm x 415 mm x 560 mm (12.8 in x 16.3 in x 22.0 in)

1. 60 Hz models are listed by CSA and the US Testing Company.
2. See the Installation Manual for additional considerations when sizing the generator set compartment.

### 3.5 List of Acronyms

4 Operation

4.1 Key Component Locations

The control panel and the components requiring attention during periodic maintenance (see Section 5.1 on page 31) are located behind a removable access cover. The figure below illustrates the components of a typical generator set. There may be some variation depending on the generator set model.

- To remove the access cover:
  1. Slide the cover latches up and pull the cover outward from the bottom.
  2. Lower the cover to remove it from the housing.
- To replace the access cover:
  1. Position the tabs on the top of the cover into the openings on the housing.
  2. Slide the latches up and push the bottom of the cover in place.
  3. Hold the cover in place firmly and release the latches.

**WARNING**

Operating the generator set with the access cover off can result in severe personal injury or equipment damage. Hot components are exposed when the access cover is removed and generator set cooling air does not circulate properly. Do not operate the generator set with the access cover removed.

4.2 Control Panel

4.2.1 Generator Set Control Panel

No. | Name               | Description                                                                                                                                 |
---|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
1  | Status Indicator  | LED in the control switch that blinks rapidly during cranking. Stays on continuously after generator set is running. If the generator set shuts down abnormally, the indicator blinks a numerical code to indicate the cause of the shutdown (see Chapter 6 on page 49). |
2  | Control Switch     | Used to start and stop the generator set, and to prime the engine fuel system. Hold the switch in its START position to crank and start the generator set. Press the switch to the STOP position to stop the generator set. Hold the switch in its STOP/PRIME position to prime the fuel system (gasoline models only). |
3  | Line Circuit Breaker | Protects the AC power leads connected to the generator set from overloads and equipment short circuits.                                      |

FIGURE 3. GENERATOR SET CONTROL PANEL

4.2.2 Remote Control Panel

A remote control panel may be installed inside the vehicle. There are 3 remote control panel kits available.

- Control switch with status indicator.
- Control switch with status indicator and an hour meter.
- Control switch with status indicator and a DC voltmeter.
### No. | Name | Description
--- | --- | ---
1 | Control Switch | Used to start and stop the generator set, and to prime the engine fuel system. Hold the switch in its Start position to crank and start the generator set. Press the switch to the Stop position to stop the generator set. Hold the switch in its Stop position to prime the fuel system. 
2 | Status Indicator | LED in the control switch that blinks rapidly during preheat and cranking. Stays on continuously after generator set is running. If the generator set shuts down abnormally, the indicator flashes a numerical code to indicate the cause of the shutdown (see Chapter 6 on page 49). 
3 | Hour Meter | Records the total running time of the generator set. Cannot be reset. 
4 | DC Voltmeter | Displays voltage of the generator set. If the voltage across the 12 VDC control system consistently stays above or below 12 VDC, see Section 5.4 on page 32.

<tr>
<td>• Inability to think clearly</td>
</tr>
<tr>
<td>• Nausea</td>
</tr>
<tr>
<td>• Vomiting</td>
</tr>
</tbody>
</table>

**WARNING**

**EXHAUST GAS IS DEADLY!**

*Exhaust gases contain carbon monoxide, an odorless, colorless gas. Carbon monoxide is poisonous and can cause unconsciousness and death. Symptoms of carbon monoxide poisoning include:*  
- Dizziness  
- Muscular twitching  
- Weakness and sleepiness  
- Throbbing in temples  
- Headache  
- Inability to think clearly  
- Nausea  
- Vomiting

**IF YOU OR ANYONE ELSE EXPERIENCES ANY OF THESE SYMPTOMS, GET OUT INTO THE FRESH AIR IMMEDIATELY.** If symptoms persist, seek medical attention. Shut down the generator set and do not operate it until it has been inspected and repaired.

Never occupy the vehicle with the generator set running unless the vehicle is equipped with a working carbon monoxide detector. However, primary protection against inhaling carbon monoxide is proper installation of the exhaust system, and daily (every 8 hours) inspection for visible and audible exhaust system leaks.

Perform pre-start checks before the first start of the day and after every 8 hours of operation. See [Chapter 5 on page 31](#) if the vehicle has been in storage.

1. Make sure all vehicle CO detectors are working properly.
2. Remove access cover.
3. Inspect the generator set as instructed in [Chapter 5 on page 31](#).
4. Perform any maintenance due ([Section 5.1 on page 31](#)).
5. Keep a maintenance log ([Chapter 7](#)).
6. Check for signs of fuel and exhaust leaks and for damage to the exhaust system.
7. Replace access cover.
8. Turn off the air conditioner and other large appliances.

### 4.3.2 Priming the Fuel System

The fuel system should be primed after the fuel filter is replaced or after the generator set runs out of fuel.

Position the control switch to **STOP/PRIME** for 30 seconds. The status indicator stays on while the pump is on.
4.3.3 Starting the Generator Set

1. Visually inspect for fuel and exhaust leaks. Do not start the generator set until any fuel or exhaust leak is repaired.

2. Position and hold the control switch to START until the generator set starts. The status indicator on the switch flashes while cranking. It will stay on continuously when the generator set is running.

3. If the generator set fails to start, cranking will stop in approximately 30 seconds. The status indicator will blink, indicating an over crank fault. Wait 5 seconds for the control to reset before trying again. After 5 tries, let the starter motor cool down for 30 seconds before trying again. See Chapter 6 on page 49 if the generator set does not start after several tries.

   **CAUTION**

   *The starter motor can be damaged by overheating. Allow it to cool down for 30 seconds after every fifth crank.*

4. For top performance and engine life, especially in colder weather, let the engine warm up for 2 minutes before connecting appliances.

5. See Chapter 6 on page 49 if the generator set shuts down and the status indicator blinks, indicating a fault.

4.3.4 Stopping the Generator Set

1. Turn off the air conditioner and other large appliances.

2. Run generator set for 2 minutes to allow for cool down.

3. Press the control switch in its STOP position.

4.4 Loading the Generator Set

The power rating (kW) on the generator set nameplate determines how much electrical load (motors, fans, heaters, air conditioners, and other appliances) the generator set can power. If the sum of the loads exceeds the generator set power rating, the generator set will shut down or its line circuit breakers will trip.

**NOTICE**

*It may be necessary to run fewer appliances at the same time—the sum of the loads must not be greater than the generator set power rating.*

To avoid shutdowns due to generator set overload, use the electrical ratings on the nameplates of equipment (if available) to compare the sum of the electrical loads that are likely to be used at the same time to the generator set power rating. Refer to the table below for typical appliance ratings.

Appliance load and generator set power are measured in terms of Watts (W) or kilowatts (kW), where 1 kilowatt (kW) = 1000 Watts (W).

- If the equipment is marked in Amps and Volts only, multiply the Amps times the Volts to obtain the load in Watts.
- Divide Watts by 1000 to obtain load in terms of kilowatts.

It is possible that the generator set circuit breaker may trip even though the sum of the steady state loads is less than the generator set power rating. When a large motor or air conditioner is started last or cycles off and on, the startup load is larger than its normal running load, causing the load to temporarily exceed the generator set power rating.
Typical "invisible" charging loads:

- During startup, air conditioners need "reserve" power and can draw 3–4 times the typical 1400–2400 Watts needed to run. Too much baseload can prevent air conditioners from starting.
- Battery chargers are activated automatically and can draw a large load (up to 3000 Watts). Manage electrical loads by adjusting battery charge rates to best suit your needs. Consult your inverter/charger manual or manufacturer.

1 Battery chargers can be a source of significant load and will be on whether they are connected to shore power or the generator set.

### 4.4.1 Power Versus Altitude

The generator set is rated at standard barometric pressure, humidity, and air temperature (reference ISO 3046). Low barometric pressure (high altitude) or high ambient temperature decreases engine power.

- As ambient temperature increases, rated generator set engine power decreases approximately 1% for every 5.5 °C (10 °F) above 25 °C (77 °F).
- Power decreases approximately 3.5% of rated power each 305 m (1000 ft) of increase in elevation. Refer to the table below for typical elevation/generator set power calculations.

**NOTICE**

It may be necessary to run fewer appliances at higher altitudes and ambient temperatures.

**TABLE 7. POWER VERSUS ALTITUDE**

</tbody>
</table>

1. Does not take into account the effect circuit breakers may have in limiting maximum power.

### 4.5 Exercising the Generator Set

Exercise the generator set at least 2 hours each month if use is infrequent. Run the generator set at approximately 1/2 rated power. A single 2-hour exercise period is better than several shorter periods.

Exercising a generator set drives off moisture, relubricates the engine, replaces stale fuel in fuel lines, and removes oxides from electrical contacts and generator slip rings. The result is better starting, longer engine life, and greater reliability.
4.6 Resetting Line Circuit Breakers

If a generator set line circuit breaker or a circuit breaker in the power distribution panel trips, either a short circuit has occurred or too many loads were connected.

| NOTICE |
The generator set continues to run if its circuit breaker trips.

If a circuit breaker trips:
1. Disconnect or turn off as many electrical loads as possible.
2. Reset the circuit breaker.
3. If the circuit breaker trips right away, either the appliance (or electrical load) has a short or the circuit breaker is faulty. Call a qualified electrician.

| NOTICE |
It may be necessary to push the circuit breaker OFF to reset it and ON to reconnect the circuit.

4. If the circuit breaker does not trip right away, reconnect loads one-by-one making sure not to overload the generator set or cause a circuit breaker to trip. If a circuit breaker trips right away when an appliance is connected, that appliance or circuit probably has a short.

![Diagram](image)

**FIGURE 5. CIRCUIT BREAKER CONNECTIONS**

| WARNING |
Short circuits in electrical equipment can cause fire and electrical shock leading to severe personal injury or death. Electrical equipment and its grounding must be maintained properly to protect against short circuits.

Electrical equipment must be used and maintained properly, and be properly grounded, to cause the line circuit breakers to trip when short circuits occur.

Electrical appliances and tools must be used and maintained in accordance with their manufacturer's instructions and safety precautions. Proper grounding is needed to reduce the risk of electric shock and fire.
4.7 Connecting Shore Power

**WARNING**

*Interconnecting the generator set and shore power can lead to electrocution of utility line workers, equipment damage, and fire. Use an approved switching device to prevent interconnections.*

A vehicle with provisions for connecting utility power must have an approved device to keep the generator set and utility from being interconnected. See the generator set Installation Manual for more information.

4.8 Operating in Weather Extremes

Pay particular attention to the following items when operating the generator set in cold or hot weather.

1. Make sure nothing blocks airflow to and from the generator set.
2. Make sure engine oil viscosity is appropriate for the ambient temperature. See Section 5.5 on page 33 for engine oil recommendations.
3. Keep the generator set clean.

4.9 Operating in Dusty Environments

Pay particular attention to the following items when operating the generator set in dusty environments.

1. Do not let dirt and debris accumulate inside the generator set compartment. Keep the generator set clean.
2. Perform air filter element maintenance more often.
3. Change engine oil more often.

4.10 Care of New or Rebuilt Engine

Proper engine break-in on a new generator set or on one with a rebuilt engine is essential for top engine performance and acceptable oil consumption. Run the generator set at approximately 1/2 rated power for the first 2 hours and at 3/4 rated power for 2 more hours.

Proper engine oil and oil level are especially critical during break-in because of the higher engine temperatures that can be expected. Change the oil if the oil is not appropriate for the ambient temperatures during break-in. See Section 5.5 on page 33 for engine oil recommendations.

Check oil level twice a day or every 4 hours during the first 20 hours of operation and change the oil after the first 20 hours of operation.
5 Maintenance

![WARNING]

*Only authorized and competent personnel who are familiar with the equipment and its operation should carry out maintenance.*

5.1 Periodic Maintenance

![WARNING]

*Accidental starting can cause severe personal injury or death. Turn off the AGS whenever performing maintenance or service, when the vehicle is stored between uses, is awaiting service, or is parked in a garage or other confined area.*

Periodic maintenance is essential for top performance and long generator set life. Use the Periodic Maintenance Schedule below for normal periodic maintenance. In hot and dusty environments some maintenance procedures should be performed more frequently, as indicated by the footnotes in the schedule. Keeping a log of maintenance performed and hours run will help keep generator set maintenance regular and provide a basis for supporting warranty claims (see Chapter 7).

Maintenance, replacement, or repair of emission control devices and systems may be performed by any engine repair establishment or individual. However, warranty work must be completed by an authorized Cummins Service Representative.

5.1.1 Periodic Maintenance Schedule

</tbody>
</table>
MAINTENANCE PROCEDURE | MAINTENANCE FREQUENCY
---|---
Every Day or Every 8 Hours | After First 20 Hours | Every Month | Every 150 Hours | Every 450 Hours | Every 500 Hours
1 - As a part of engine break-in, change the engine oil after the first 20 hours of operation.
2 - Perform more often when operating in dusty environments.
3 - Perform more often when operating in hot weather.
4 - Perform at least once a year.
5 - Perform sooner if engine performance deteriorates.
6 - Must be performed by a qualified mechanic (authorized Cummins Service Representative).
7 - Must be completed for optimum performance.

5.2 Consumable Parts

The following is a list of consumables associated with the generator models covered in this manual:

### TABLE 9. CONSUMABLE PARTS

5.3 General Inspection

1. Check battery connections ([Section 5.4 on page 32](#)).
2. Check engine oil level ([Section 5.5 on page 33](#)).
3. Check fuel system ([Section 5.6 on page 36](#)).
4. Check exhaust system ([Section 5.7 on page 39](#)).
5. Check mechanical system ([Section 5.8 on page 40](#)).

5.4 Maintaining the Battery

The generator set requires a 12 Volt battery to power its control and starting circuits. Reliable generator set starting and starter service life depend upon adequate battery system capacity and maintenance.

**WARNING**

Fire Hazard

*Flames, sparks, or arcing at battery terminals, light switches, or other equipment can ignite battery gas, causing severe personal injury.*

*Ventilate the battery area before working on or near a battery, wear safety glasses, and do not smoke. Turn work light on or off away from the battery.*
Refer to Section 5.1 on page 31 for the battery maintenance schedule and follow the battery manufacturer's instructions. Have the battery charging system serviced if DC system voltage is consistently low or high.

Check the battery terminals for clean, tight connections. Loose or corroded connections have high electrical resistance which makes starting harder.

1. Keep the battery case and terminals clean and dry.
2. Keep the battery terminals tight.
3. Remove battery cables with a battery terminal puller.
4. Make sure which terminal is positive (+) and which is negative (−) before making battery connections, always removing the negative (−) cable first and reconnecting it last to reduce arcing.

5.5 Maintaining the Lubrication System

Keep dirt, water, and other contaminants from entering the lubrication system and corroding or clogging lubrication components.

5.5.1 Oil Level

Park the vehicle on level ground and stop the generator set before checking engine oil level.

1. Unscrew the oil fill cap and wipe oil off the dipstick.
2. Reinsert without screwing in the dipstick.
3. Remove the dipstick again to check oil level.
4. Add or drain oil as necessary. Keep the oil level between the full and add marks.
5. Insert the dipstick and screw the oil fill cap back on securely.
5.5.2 Engine Oil Recommendations

• Use API (American Petroleum Institute) performance Class SJ, SH or SG engine oil, which may be in combination with performance Class CH-4, CG-4 or CF-4 (for example: SJ/CH-4).

• Look for the SAE (Society of Automotive Engineers) viscosity grade. Choose the viscosity grade appropriate for the ambient temperatures expected until the next scheduled oil change.

• Single-grade SAE 30 oil is preferable when temperatures are consistently above freezing. Multigrade oils are better when wide temperature variations are expected.

<table>
<thead>
<tr>

5.5.3 Changing Engine Oil

**WARNING**

**Accidental or Remote Starting**

Accidental or remote starting can cause severe personal injury or death. Before removing a panel or access door, or before working on the generator set, use an insulated wrench to disconnect the negative (-) cable from the battery to prevent accidental starting.

**WARNING**

**Hot Surfaces**

Contact with hot surfaces can cause severe burns, lacerations and liquid splash. Wear appropriate PPE when working on hot equipment and avoid contact with hot surfaces.
WARNING

Toxic Hazard
State and federal agencies have determined that contact with used engine oil can cause cancer or reproductive toxicity.
 Avoid skin contact and breathing of vapors. Use rubber gloves and wash exposed skin.

Refer to Section 5.1 on page 31 for the engine oil change schedule. Change oil more often in hot or dusty environments.

1. Run the generator set under load until it is up to operating temperature, stop it, and disconnect the negative (–) battery cable at the battery.

WARNING

Crankcase Pressure
Crankcase pressure can blow hot engine oil out the fill opening causing, severe burns.
Always stop the generator set before removing the oil fill cap.

2. Remove the oil fill cap.

3. Place a pan underneath the oil drain plug and remove the plug with a socket (see Oil Change Values and Drain Plug Location below). Let all oil drain from the engine.

4. Replace the plug. Tighten to torque value in Oil Change Values below.

NOTICE

Too little oil can cause severe engine damage. Too much oil can cause high oil consumption. Keep the oil level between the high and low beads (or markings) on the dipstick.

5. Refill with oil (see Oil Change Values below). Check the oil level and add or drain oil as necessary.

6. Screw the oil fill cap on securely.

7. Reconnect the negative battery cable.

8. Run the generator for a few minutes, shut it down, and recheck for proper oil level and leaks.

9. Dispose of the used oil in accordance with local environmental regulations.

5.6 Maintaining the Fuel System

Keep dirt, water, and other contaminants from entering the fuel system and corroding or clogging fuel system components.

5.6.1 Fuel System

**WARNING**

*Combustible Liquid*

*Fuel leaks are a fire or explosion hazard which can cause severe burns or death.*

*Do not run the generator set if there is an indication of a fuel leak or causes fuel to leak.*

1. Check for leaks at the hose, tube, and pipe fittings in the fuel supply system while the generator set is running and while it is stopped.
2. Check flexible fuel hoses sections for cuts, cracks, abrasions, and loose hose clamps.
3. Make sure the fuel line does not rub against other parts of the vehicle or generator set.
4. Replace worn or damaged fuel line parts before leaks occur.
5. If an LPG generator set and gas odor is detected, close the LPG container shutoff valve and have the generator set serviced.
5.6.2 Fuel Recommendations

**WARNING**

Gasoline and LPG are highly flammable and explosive and can cause severe personal injury or death. Do not smoke or turn electrical switches ON or OFF where fuel fumes, tanks, or equipment are present; or in areas sharing ventilation. Keep flames, sparks, pilot lights, arc-producing equipment and switches, and all other sources of ignition well away. Keep a type ABC fire extinguisher in the vehicle.

5.6.2.1 Gasoline Models

Use clean, fresh unleaded gasoline having a minimum octane rating (Anti-Knock Index) of 87.

- Ethanol Blend - Not more than 10% ethanol
- Methanol Blend - Not more than 5% methanol and the fuel must also contain solvents and corrosion inhibitors.

**CAUTION**

Using gasoline containing more than 5% methanol, or gasoline additives containing methanol, can be corrosive to fuel system components.

**NOTICE**

Avoid using leaded gasoline because of the extra engine maintenance required.

5.6.2.2 LPG Models

Use clean, fresh HD-5 grade liquefied petroleum gas (LPG) or equivalent product consisting of at least 90 percent propane. Commercial LPG fuels may contain more than 2.5 percent butane which can result in poor fuel vaporization and poor engine starting in low ambient temperatures (below 0 °C (32 °F)).

Satisfactory performance on low-pressure LPG models requires that the LPG vapor be supplied at a pressure within the range indicated in the specifications chapter.

**WARNING**

High LPG supply pressure can cause gas leaks which can lead to fire and severe personal injury or death. LPG supply pressure must be adjusted to Specifications by trained and experienced personnel.

5.6.3 Replacing the Fuel Filter

**WARNING**

Accidental or Remote Starting

Accidental or remote starting can cause severe personal injury or death. Before removing a panel or access door, or before working on the generator set, use an insulated wrench to disconnect the negative (-) cable from the battery to prevent accidental starting.
### WARNING

**Hot Surfaces**  
*Contact with hot surfaces can cause severe burns, lacerations and liquid splash. Wear appropriate PPE when working on hot equipment and avoid contact with hot surfaces.*

---

### WARNING

**Gasoline is highly flammable and explosive and can cause severe personal injury or death. Do not smoke or turn electrical switches ON or OFF where fuel fumes, tanks, or equipment are present; or in areas sharing ventilation. Keep flames, sparks, pilot lights, arc-producing equipment and switches, and all other sources of ignition well away. Keep a type ABC fire extinguisher in the vehicle.**

Refer to [Section 5.1 on page 31](#) for scheduled fuel filter replacement. Replace the fuel filter if the engine lacks power.

1. Disconnect the negative (−) cable at the battery to prevent the engine from starting.
2. Remove the front access door.
3. Let engine cool down to prevent igniting any fuel that may be spilled when disconnecting the fuel filter.
4. Loosen the fuel line hose clamps and remove the fuel filter. Plug the fuel lines to prevent fuel leakage and vapor accumulation.
5. Connect the new fuel filter to the fuel line.
6. Prime the engine for at least 30 seconds to fill the new fuel filter. Check for leaks as the generator set runs for several minutes.
7. Tighten the clamps, if necessary.
8. Replace the front access door.
9. Connect the negative (−) cable at the battery.
10. Dispose of the old filter in accordance with local environmental regulations.
5.7 Exhaust System

**WARNING**

**EXHAUST GAS IS DEADLY! Do not operate the generator set if there is an exhaust leak or any danger of exhaust gasses entering or being drawn into the vehicle.**

**WARNING**

Grass or brush in contact with the exhaust system can cause fire. Do not park the vehicle in high grass or brush.

1. Look and listen for exhaust system leaks while the generator set is running. Shut down the generator set if a leak is found and have it repaired before operating.

2. Look for openings or holes between the generator set compartment and vehicle cab or living space if the generator set engine sounds louder than usual. Have all such openings or holes closed off and sealed to prevent exhaust gases from entering the vehicle.

3. Replace dented, bent, or severely rusted sections of the tailpipe and make sure the tailpipe extends at least 25.4 mm (1 in) beyond the perimeter of the vehicle.

4. Park the vehicle so that generator set exhaust gases disperse away from the vehicle. Barriers such as walls, snow banks, high grass, brush, and other vehicles can cause exhaust gases to accumulate in and around the vehicle.

5. Do not operate power ventilators or exhaust fans while the vehicle is standing with the generator set running. The ventilator or fan can draw exhaust gases into the vehicle.
6. Check all CO monitors to assure proper operation.

5.8 Mechanical System

**WARNING**

*Compressed air, pressure washers, and steam cleaners can cause severe eye injury. Always wear safety glasses when using.*

1. Look for mechanical damage and listen for unusual noises and vibrations.
2. Check the generator set mounting bolts.
3. Check to see that the generator set air inlet and outlet openings are not clogged with debris or blocked.
4. Clean accumulated dust and dirt from the generator set. Do not clean the generator set while it is running or still hot. Protect the generator, air cleaner, control panel, and electrical connections from water, soap, and cleaning solvents.

5.8.1 Gasoline Choke Assembly

The generator set has an automatic choke assembly that consists of a bimetal choke coil, coil housing, heater tube (from the exhaust tube), and choke linkage. The choke linkage connects to the choke shaft lever on the carburetor.

When the engine is cold, the choke coil position causes the linkage to hold the choke nearly closed. When the engine starts, hot air from the exhaust manifold enters the coil housing. The choke coil expands pulling the linkage to partially open the choke. As the engine warms up, the coil continues to expand and gradually opens the choke and holds it open while the engine is operating.

If the engine starts but runs rough and exhausts black smoke after a minute or two of operation, the choke setting is too rich. If the engine starts but sputters or stops before it warms up, the choke setting is too lean.

**Choke Adjustment:** Check the choke linkage to make sure it is not bent or rubbing. Rotate the choke lever on the carburetor. The choke shaft should move freely and it should return to its original position when released.

**WARNING**

*The choke housing becomes hot during operation and can cause severe burns if touched. Allow the generator set to cool down before handling the choke assembly.*

1. Allow the generator set to cool down. The temperature inside the housing must be the same as the ambient temperature.
2. Loosen the adjustment screw holding the adjustment plate.
   - If ambient temperature is different than 68 °F (20 °C), rotate the adjustment plate according to the following table:

<table>
<thead>
<tr>
<th>Ambient Temp (°C)</th>
<th>8</th>
<th>14</th>
<th>20</th>
<th>26</th>
<th>32</th>
<th>38</th>
</tr>
</thead>

<td>CCW</td>
</tr>
</tbody>
</table>

Copyright © 2018 Cummins Inc.
3. Rotate the choke link plate on the carburetor until it is parallel to the carburetor flange.

4. Keeping that choke lever position, remove any tension of bimetal (tapping the adjustment plate or bimetal box lightly).

5. Tighten the adjustment bolt at that position. Release the choke lever and it should rotate back some by return spring.

**NOTICE**

This is the position the choke lever should be in when the ambient temperature is 68 °F (20 °C).

6. Move the choke lever back and forth to check for free movement. Verify that the choke does not bind or stick.

![FIGURE 9. CHOKE ADJUST](image-url)
Bimetal Coil Replacement: After making the choke adjustment, start the generator set and observe engine operation. If the choke does not open properly, replace the bimetal coil in the choke housing as follows.

1. Remove the adjustment screw and washer from the choke coil housing.
2. Remove the housing. Straighten the tab from the adjustment plate to release the bimetal coil.
3. Remove choke linkage from the bimetal coil and install linkage on the new coil.
4. Assemble the new coil to the adjustment plate and bend the tab on the adjustment plate to secure coil.
5. Install choke coil housing and secure with screw and washer. Perform the choke adjustment procedure.
5.9 Replacing the Air Filter Element

**WARNING**

*Accidental or Remote Starting*

*Accidental or remote starting can cause severe personal injury or death.*

*Before removing a panel or access door, or before working on the generator set, use an insulated wrench to disconnect the negative (-) cable from the battery to prevent accidental starting.*

**WARNING**

*Hot Surfaces*

*Contact with hot surfaces can cause severe burns, lacerations and liquid splash.*

*Wear appropriate PPE when working on hot equipment and avoid contact with hot surfaces.*

Refer to **Section 5.1 on page 31** for scheduled air filter element replacement. Under dusty operating conditions, inspect and replace more often.

1. Remove the front access cover.
2. Unlatch the air filter cover from the base and slide out the cover and filter together.
3. Remove air filter element from the cover.
4. Install new air filter element into the cover and slide back into position, making sure the two tabs at the rear of the cover are inserted into slots in the base.
5. Engage the latch.
6. Replace the front access cover.

---

**No.** | **Description** | **No.** | **Description**
---|---|---|---
1 | Air Filter Cover | 2 | Air Filter Element

**FIGURE 11. AIR FILTER ELEMENT**

5.10 Replacing the Spark Plug(s)

Refer to **Section 5.1 on page 31** for scheduled spark plug replacement. The spark plug(s) must be in good condition for proper engine starting and performance. A spark plug that fouls frequently or has heavy soot deposits indicates that the engine needs service. Refer to **Chapter 6 on page 49**.

1. Remove the front access cover.
2. Unscrew the spark plug and remove.
3. Thread the spark plug in by hand until it seats. Tighten to 17 Nm (13 ft-lbs).

**NOTICE**
Always thread the spark plug in by hand until it seats to prevent cross-threading.

**NOTICE**
If a torque wrench is not available, turn the spark plug an additional 1/4 turn if being reused, or 3/8 to 1/2 turn for a new spark plug.

4. Replace the front access cover.

![Spark Plug(S)](image)

**FIGURE 12. SPARK PLUG(S)**

### 5.11 Cleaning the Spark Arrester

It may be necessary to clean out the spark arrester if the generator set is experiencing low power. Park the vehicle away from grass, brush or debris that could be ignited by sparks expelled during this procedure. The spark arrester meets U.S. Forest Service requirements.

**WARNING**

_A hot muffler can cause severe burns. Let the muffler cool down before removing or installing spark arrester cleanout plugs or screens._

The spark arrester screen is mounted inside the muffler outlet.

1. Loosen the U-bolt clamp that secures the tailpipe to the muffler (inside the generator set housing) and move the tailpipe aside.
2. Remove the screw that secures the spark arrester tube/screen inside the muffler outlet.
3. Remove the spark arrester tube and inspect the screen inside for damage and clogging. Replace if damaged.
4. Lightly tap the spark arrester and remove any remaining deposits with a wire brush. Use a commercial solvent to loosen hard deposits. (Carefully follow the solvent manufacturer's instructions and safety precautions.)
5. Reinstall the spark arrester and tailpipe.
5.12 Storing the Generator Set

Proper storage is essential for preserving top generator set performance and reliability. If the generator set is not going to be exercised on a regular basis and not be used for more than 120 days, the generator set should be prepared for storage.

1. If the generator set is a gasoline model, perform the following steps.

   a. Fill the fuel tank with fresh fuel and add a fuel preservative (such as OnaFresh), following the instructions on the container label.

   b. Run the generator set for about 30 minutes plus 2 minutes per foot of fuel line at approximately 1/2 rated power to fill the fuel lines with fresh fuel and preservative.
2. Change the engine oil and attach a tag indicating the oil grade viscosity.

3. Remove the air filter and restart the generator set. While the generator set is running, spray an engine fogger (such as OnaGard) into the carburetor, following the instructions on the container label.

**NOTICE**

The engine fogger leaves a protective coat of oil on the internal surfaces of the engine.

4. Stop the generator set.

5. Disconnect all appliances.

6. Disconnect the battery cables, negative (–) cable first, from the starting battery and store the battery according to the battery manufacturer's recommendations.

7. Cap the exhaust tail pipe to keep out dirt, moisture, rodents, and other foreign materials.

8. Close the fuel supply valve (if so equipped).

9. Position the line circuit breaker to OFF.

**WARNING**

*LPG leaks can lead to explosive accumulation in pits, sumps, or other below-grade locations. Comply with all local ordinances regarding the garaging of vehicles with LPG engine fuel systems.*

10. If the generator set is an LPG model, check the local ordinances if the vehicle is going to be garaged. Generally, ordinances require that the LPG system be leak-free, that the LPG container not be filled beyond specified limits, that the container shutoff valve be closed, and that the vehicle not be parked near sources of heat or ignition.

**WARNING**

Do not open the carburetor drain when the engine is hot. Close the drain immediately after draining. Failure to heed this warning can lead to fire resulting in severe personal injury or death.

11. If the generator set is a gasoline model, perform the following steps to drain the carburetor float bowl.

**NOTICE**

Draining the float bowl prevents deposits of gum from clogging the tiny passages in the carburetor because the gasoline in the bowl evaporates during storage.

a. Let the engine cool down thoroughly.

b. Place paper towels under the drain to absorb all of the drainage (less than 1/2 cup).

**WARNING**

Opening the carburetor drain when the engine is hot can lead to fire resulting in severe personal injury or death. Do not open the drain when the engine is hot. Close the drain immediately after draining.

c. Open the drain valve by turning counter-clockwise with a screwdriver.
5. When draining is done, close the drain valve, turning clockwise with a screwdriver until just snug.

5.12.1 Carburetor Float Bowl Drain Valve

TABLE 13. CARBURETOR FLOAT BOWL DRAIN VALVE

5.13 Returning the Generator Set to Service

1. Verify that the oil viscosity is appropriate for expected temperatures (see Maintaining the Lubrication System) and change the oil if the viscosity is not appropriate for the temperatures expected.

2. Reconnect the starting battery (negative [-] cable last).

3. Inspect the air filter element. Use a new air filter element if it is dirty.

4. Inspect the generator set.

5. If the generator set is a gasoline or diesel model, prime the generator set fuel system by positioning the control switch to STOP/PRIME for 30 seconds. The status indicator stays on while the pump is on.
6. Start the generator set. There may be smoke and rough operation for a few minutes until the oil from the fogger burns off. If the engine does not start, clean or replace the spark plug, which may have been fouled by the fogger.

7. Position the line circuit breaker to ON when the generator set is ready to power loads.
6 Troubleshooting

6.1 Overview

**WARNING**

Hot engine parts can cause severe burns. Always allow the engine to cool down before performing any maintenance or service.

The following paragraphs provide fault code faults and symptom-based faults. If a problem is not resolved after taking the corrective actions suggested, contact a local dealer or distributor. See Section 2.4 on page 11.

**NOTICE**

Maintaining engine oil level, keeping battery connections clean and tight, watching the fuel gauge, not overloading the generator set, etc. will prevent most shutdowns.

**NOTICE**

When the generator set and vehicle engine share a common fuel tank, the fuel dip tubes are usually arranged so that the generator set will run out of fuel first. Marking the generator set empty point on the fuel gauge will make it easier to tell when to stop the generator set before running it out of fuel.

6.2 Fault Codes

The generator set control contains extensive diagnostics to detect shutdown faults. Following a fault shutdown, the control indicates the fault code by flashing the numeric code on the status indicator in the control switch.

Determine the fault code as follows:

- 3 flashes indicates a service fault (Code 3 fault).
  1. Press STOP/PRIME on the control switch once to have the 2-digit service fault code flash.
     The 2-digit code consists of two sets of flashes. The first set is of flashes represents the 10s digit of the code. After a brief pause, the second digit of the code flashes representing the unit digit of the code. This is followed by a long pause before repeating the flashing of the fault code.
     For example, Fault Code 36 appears as: blink-blink-blink—pause—blink-blink-blink-blink-blink-blink-blink—long pause—repeat
  2. Press STOP/PRIME to stop flashing the fault code.
- 4 flashes indicates that cranking exceeded 30 seconds without the engine starting (Code 4 fault).

**NOTICE**

Fault codes 33 and 34 are not assigned as fault codes. Be careful of interpreting Fault Codes 3 and 4 as second-level faults.
The fault code stops flashing after 5 minutes. Pressing **STOP/PRIME** 3 times within 5 seconds causes the fault code to resume flashing.

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>The last fault logged continues to flash even though the condition that caused the shutdown has been corrected.</strong></td>
</tr>
</tbody>
</table>

### 6.2.1 Code 2 - Low Oil Pressure
Indicates that the low oil pressure cutoff switch did not open.

#### A. Check Engine Oil Level
1. If the dipstick indicates oil is low, add oil.
2. If oil is above the full mark on dipstick, drain excess oil.

### 6.2.2 Code 3 - Service Check
See second-level fault code.

### 6.2.3 Code 4 - Over Crank
Indicates that cranking exceeded 30 seconds without engine starting.

#### A. Check Fuel Level
1. If fuel level is low, fill the fuel tank.
   
<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>The generator set fuel pickup tube could be higher up in the fuel tank than the vehicle engine pickup.</strong></td>
</tr>
</tbody>
</table>

2. Prime the engine fuel system by positioning the control switch to **STOP/PRIME** for 30 seconds.

#### B. Check LPG Level
Check and fill the LPG container, as necessary.

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>On cold days, the LPG container may have to be kept at least half full to provide the rate of vaporization necessary to keep up with the generator set fuel demand.</strong></td>
</tr>
</tbody>
</table>

#### C. Check Spark Plug(s)
1. Secure the spark plug lead(s) on the spark plug(s).
2. Replace the spark plug(s).

#### D. Check Air Filter Element
Replace the air filter if dirty.
E. Replace Engine Oil

Replace engine oil with oil of proper viscosity for the ambient temperature.

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>High oil viscosity can slow down cranking speed.</td>
</tr>
</tbody>
</table>

F. Check Fuel Fittings

1. Tighten any fuel fitting if there is a fuel or air leak.
2. Reprime the engine fuel system by positioning the control switch to STOP/PRIME for 30 seconds.

G. Replace Fuel Filter

6.2.4 Code 12 - Over Voltage
Indicates the control is unable to maintain rated voltage.

A. Contact Local Dealer or Distributor

6.2.5 Code 13 - Under Voltage
Indicates the control is unable to maintain rated voltage.

A. Reduce Load
Reduce the number of connected appliances, especially air conditioners and battery chargers. (Review load management in Section 4.4.)

6.2.6 Code 14 - Over Frequency
Indicates the engine governor is unable to maintain rated frequency.

A. Contact Local Dealer or Distributor

6.2.7 Code 15 - Under Frequency
Indicates the engine governor is unable to maintain rated frequency.

A. Reduce Load
Reduce the number of connected appliances, especially air conditioners and battery chargers. (Review load management in Section 4.4.)

6.2.8 Code 27 - Voltage Sense
Indicates the control is unable to sense output voltage.
A. Contact Local Dealer or Distributor

6.2.9 Code 29 - High Battery Voltage
Indicates that voltage across the battery system is greater than 19 Volts.

A. Check Battery
1. Check battery bank connections and reconnect if necessary so that the 12 Volt batteries serving the generator set are connected in parallel (12 Volt) rather than in series (24 Volt).
2. Select a lower battery boost charge rate.

6.2.10 Code 31 - Over Speed
Indicates that engine speed is greater than 3400 RPM.

A. Contact Local Dealer or Distributor

6.2.11 Code 32 - Low Cranking Speed
Indicates that cranking speed is less than 180 RPM for more than 2 seconds.

A. Check Battery
1. Clean and tighten the positive (+) and negative (–) battery cable connections at the battery and at the generator set.
2. Recharge or replace the battery. Refer to the battery manufacturer's recommendations.

B. Replace Engine Oil
Replace engine oil with oil of proper viscosity for the ambient temperature.

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>High oil viscosity can slow down cranking speed.</td>
</tr>
</tbody>
</table>

6.2.12 Code 35 - Control Card Failure
Indicates that a microprocessor EEPROM error occurred during self test.

A. Contact Local Dealer or Distributor

6.2.13 Code 36 - Engine Stopped
Indicates that the engine stopped without receiving a command from the control.

A. Check Fuel Level
1. If fuel level is low, fill the fuel tank.
NOTICE

The generator set fuel pickup tube could be higher up in the fuel tank than the vehicle engine pickup.

2. Prime the engine fuel system by positioning the control switch to STOP/PRIME for 30 seconds.

B. Check LPG Level
Check and fill the LPG container, as necessary.

NOTICE
On cold days, the LPG container may have to be kept at least half full to provide the rate of vaporization necessary to keep up with the generator set fuel demand.

C. Check Spark Plug(s)
1. Secure the spark plug lead(s) on the spark plug(s).
2. Replace the spark plug(s).

D. Check Air Filter Element
Replace the air filter if dirty.

E. Check for Mechanical Damage

6.2.14 Code 37 - Invalid Generator Set Configuration
Indicates that the frequency/RPM ratio is wrong.

A. Contact Local Dealer or Distributor

6.2.15 Code 38 - Over Current (Field Overload)
Indicates low power factor loads.

A. Reduce Load
Reduce the number of connected appliances, especially air conditioners and battery chargers. (Review load management in Section 4.4.)

B. Check Appliances for Proper Operation
Have air conditioners and other appliances checked for proper operation.

6.2.16 Code 41 - Generator Rotor
Indicates control is unable to sense field or output voltage.
A. Contact Local Dealer or Distributor

6.2.17 Code 42 - Processor
Indicates that a microprocessor ROM error occurred during self test.

A. Contact Local Dealer or Distributor

6.2.18 Code 43 - Processor
Indicates that a microprocessor RAM error occurred during self test.

A. Contact Local Dealer or Distributor

6.2.19 Code 45 - Speed Sense
Indicates the control is unable to sense quadrature frequency.

A. Contact Local Dealer or Distributor

6.2.20 Code 47 - Ignition
Indicates the control is unable to sense ignition.

A. Contact Local Dealer or Distributor

6.2.21 Code 48 - Generator Field Sense
Indicates the control is unable to sense field voltage.

A. Contact Local Dealer or Distributor

6.3 Symptom Based
Diagnosis of some problems involves observing system operation.

6.3.1 Status Indicator Not Working
Indicates that there could be faulty connections or no battery voltage.

A. Check Other Control Switch
Try the generator set control switch if the remote control switch start doesn't work, and vice versa.

B. Check Battery
1. Clean and tighten the positive (+) and negative (−) battery cable connections at the battery and at the generator set.
2. Recharge or replace the battery. Refer to the battery manufacturer's recommendations.

6.3.2 Starting Batteries Run Down
Indicates problem with batteries, connections, charging system, or parasitic loads.
A. Check Battery
   1. Clean and tighten the positive (+) and negative (−) battery cable connections at the battery and
      at the generator set.
   2. Recharge or replace the battery. Refer to the battery manufacturer's recommendations.

B. Battery Charging System
   Install or service a battery charging system in the vehicle.

6.3.3 Starter Engages-Disengages
Indicates cranking voltage dips below 6 Volts.

A. Use Vehicle to Start Generator Set
   Run the vehicle propulsion engine while trying to start the generator set—the battery charging
   alternator may be able to maintain starting voltage high enough to start the generator set.

B. Check Battery
   1. Clean and tighten the positive (+) and negative (−) battery cable connections at the battery and
      at the generator set.
   2. Recharge or replace the battery. Refer to the battery manufacturer's recommendations.

C. Change Battery Cables
   Increase battery cable size or run parallel cables.

6.3.4 Status Indicator Goes Out While Cranking—No Start
Indicates an internal short circuit caused an automatic-reset circuit protective device to trip.

A. Try Starting Again
   If the status indicator flashes and goes out again without the engine starting, call local dealer or
   distributor.

6.3.5 No Power—Generator Set Running, Status Light On
Indicates line circuit breaker is OFF, or tripped due to short circuit or overload.

A. Check Line Circuit Breakers
   1. Turn on or reset the line circuit breaker on the generator set.
   2. Turn on or reset the line circuit breaker on the main distribution panel in the vehicle.
7 Maintenance Record

Record all periodic and unscheduled maintenance and service. See the Periodic Maintenance section for more information.

Record the name, address, and phone number of your authorized Cummins service center.
